INDUSTRIAL PRODUCTS

HEALTHY AND TASTY GRAINBASED FOOD SOLUTIONS

Our products are manufactured with renewable energy. We use locally grown Finnish grains: oats, wheat, rye and barley. We are Finland's largest organic grain processor and a forerunner in gluten free oat products. We are the company to turn to when looking for high standard organic products and gluten free oat products. One third of our turnover comes from export to over 50 countries worldwide.

Our product portfolio consists of a variety of flakes, flours, bakery mixes, porridges, breakfast cereals and mueslies – conventional, organic, gluten free and plant-based. We do not use animal based products or allergens in our production. Our high quality is proven by external certifications. We have three in-house laboratories, one of which is solely dedicated to gluten free oat products.

We are a family owned Finnish milling company whose roots date back to the 17th century. We emphasize high quality standards and environmental values in our production.

We use only renewable energy in our production and our bio energy plant in Vaasa produces all the heat energy it needs by burning oat shells.

All our packages are recyclable. We are committed to reducing the use of plastic as packaging material.

We have had organic products since 1997 and today we are the largest producer of organic grain-based products in Finland. One third of our wide product portfolio is organic.

We have developed a sustainable farming program with our contract farmers. With the program we achieve larger and better yields with lower environmental impact.

We are IFS food certified which ensures product safety, high quality production process and great traceability.

We are committed to better choices: We share information about healthy

Our passion is to nourish well-being through healthy and innovative grain-based solutions with respect for nature and sustainability.

VERSATILE OATS PORTFOLIO OF HIGHEST QUALITY

Our gluten free products are manufactured from oats that are gluten freely cultivated by our contracted Finnish farmers. Because of our long frost winter period there is less need for plant protection.

The northern latitudes equals for long summer days, resulting in larger yields and crops with unique characteristics. Our gluten free baking products are easy to prepare and have a taste and texture close to conventional baking products.
